

Initial state: user balance = \$100

T1 (bet \$80)

Database

T1 (bet \$60)

SELECT balance WHERE user_id = 1

\$100

SELECT balance WHERE user_id = 1

\$100

UPDATE SET balance = 100 - 80

COMMIT

Balance is now \$20

UPDATE SET balance = 100 - 60

COMMIT

Balance = \$40 (should be) -\$40 (overdraw!) T2 used a stale read of \$100. Lost update.
